**Job Title:** Business Analyst

**Duration of Appointment:** As per the company norms.

**No. of Positions:** 1

**Remuneration:** Salary as per prevailing industry norms.

**Minimum Qualification:** Bachelor's or master's degree in computer science or a related field (BCA, MCA, BTech, MTech).

**Job Profile:** This role focuses on bridging business needs with technical solutions. Key responsibilities include gathering and analyzing requirements, documenting them (user stories, BRDs, functional specs) and supporting UAT. You'll optimize processes using technology, drive data-driven decisions with SQL, Excel, and BI tools, and facilitate stakeholder communication. Additionally, you'll support product development by prioritizing features and shaping the roadmap.

**Key Skills:** Technical (SQL, Excel, BI tools, process mapping), Communication (stakeholder management, documentation, presentation), Analytical (problem-solving, data analysis, system thinking), Business (domain knowledge, process optimization, strategic thinking).

**Success Metrics:** Requirements clarity, project delivery, stakeholder satisfaction, process improvement impact, and data-driven decision adoption.

**How to Apply:** The application should be submitted strictly online. Application in any other mode will not be accepted.
